

Newspeak 2023-2024 dictionary

- * War is Peace
- * Freedom is Slavery
- * Ignorance is Strength
- * Theft is Taxation
- * Overwatching is Regulation
- * Supervision is Centralization
- * Surveillance is Protection
- * Digital choker is Proprietary software
- * Poverty is Social good

deja vu? Like it? your life?

We have decentralization, but do we?

- * Ethereum has scammed twice(DAO fork and PoS) and there is a "MEV-Boost" that censors transactions
- * Cold/hardware wallets are leaking private keys so they are not stored securely regardless of their "chips security grades"
- * Online wallets are hacked and leaking keys
- * CEX and custodial services are blocking or looting accounts when they want or told to
- * Unless AMD SEV or Intel SGX are used in a complex setup, centrally managed OS and/or Antivirus can read all the memory including your private key
- * OS updates can silently divert your computer behaviour(blocks hosts, removes software, interferes with Tor, e.t.c.) as the vendor wants or was instructed to
- * so-called DEX are free to block or pause pairs and they are doing it
- * hardware wallets are pre-built, high-priced and unupgradeable
- * MetaMask Snaps are externally "audited", Infura censors transactions, ...

A different way of things can be provided with a new recently developed architecture secured from software to hardware, if there's a need in it

You are your very own:

- * Custodian - the private key is unreachable outside the main module unless you're exporting it by hand
- * Designer - the wallet is modular, so you buy/upgrade/replace only the modules you actually need or can create your own without thrashing your wallet
- * Update service - all the updates are supplied in source code and built locally, so you can review them and check everything under the hood all the ways you feel right
- * Trustee — secure OpenPGP, IM and SMS messaging

*40% of equity stock is offered to investor(s)
